

Parts List

Bun Feet

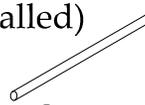

(A) 4 pcs

3/8" Long Wood Screw (installed)

(B) 4 pcs

File Bar (installed)

(C) 2 pcs

Figure 8 (installed)

(D) 4 pcs

Keys

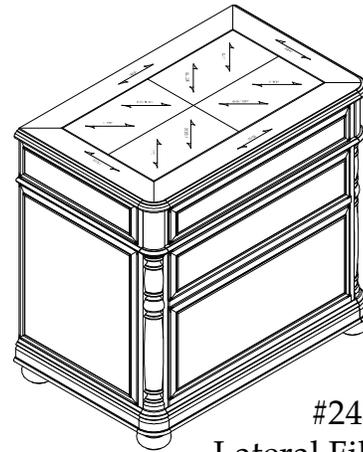

(E) 2 pcs

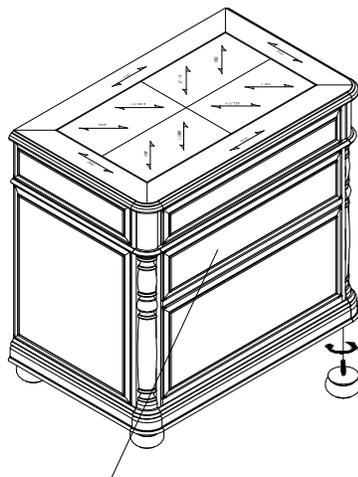

Divider (installed)

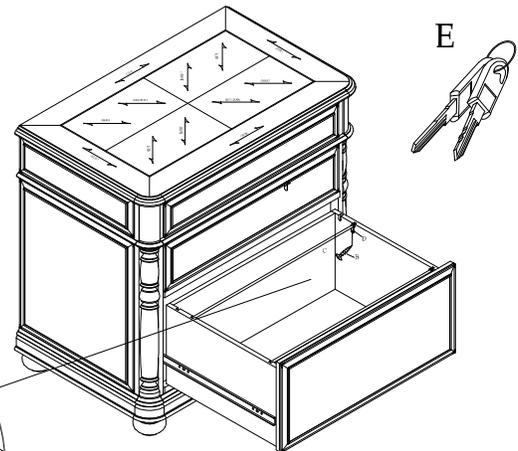

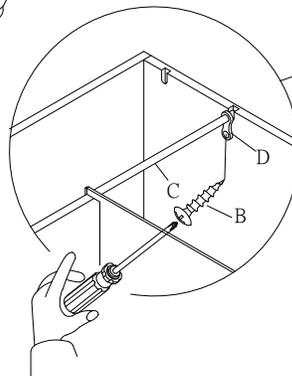

(F) 2 pcs

#24534
Lateral File Cabinet

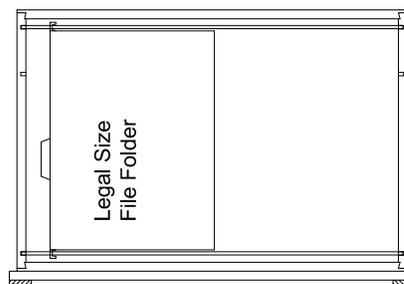

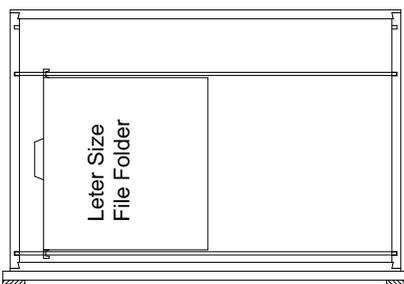

The Dividers are installed in this drawer.

ASSEMBLY STEPS :

1. Position the File Cabinet on it's back, on a soft surface such as a blanket or carpet. Attach the Bun Feet with the levelers underneath the front corners and with no levelers underneath the back corners. The levelers can be used to compensate for uneven flooring if necessary.

The File Drawer can be configured to accommodate either Letter or Legal size file folders as shown.

File Cabinet Set-Up

File Cabinet Set-up

This file cabinet has safety hardware installed to prevent both drawers from being opened at the same time, which minimizes the risk of the file cabinet accidentally tipping forward, possibly causing damage or personal injury. To properly set-up and use this file cabinet there are a few things that must be checked or steps performed before loading drawers with files and using. It is imperative that a file cabinet be level for the drawers and anti-tip interlock system to work properly. Please read this entire document before loading files into drawers. After the file cabinet has been set-up and being used, if it becomes necessary to move the file cabinet to another location, to prevent excessive stress on the cabinet, all files must be removed from the drawers and the drawers locked, if so equipped.

NEVER ATTEMPT TO OPEN BOTH DRAWERS AT THE SAME TIME BECAUSE DAMAGE TO THE FILE CABINET OR DRAWER INTERLOCK MECHANISM CAN OCCUR AND CAUSE THE FILE CABINET TO BE UNSAFE. THE DRAWERS MUST BE FULLY CLOSED FOR THE ANTI-TIP MECHANISM TO BE IN A 'NEUTRAL' POSITION AND ALLOW EITHER DRAWER TO BE OPENED. SOME FILE CABINET MODELS ARE EQUIPPED WITH KEY-LOCKS. IF NEITHER DRAWER WILL OPEN EASILY, MAKE SURE THE DRAWERS ARE NOT KEY-LOCKED.

Leveling

These lateral file cabinets are equipped with levelers underneath the front corners which can be adjusted enough to level most cabinets. When we refer to 'level' we are not necessarily meaning exactly 'level to the world', but level within limits to allow proper function of the drawers. The preferred tool to use would be a small bubble-type level if available, or for an acceptable alternative see below. Various floor coverings also have differing effects on set-up and long-term operation. For instance, if the file cabinet is placed on carpet, the carpet probably has a tack strip underneath at the edge next to a wall, which will raise the back of the file cabinet, which can cause the drawers to automatically try to open. This must be corrected with the levelers under the front of the cabinet.

After moving the file cabinet to its final location in the room, check to see if the file cabinet is level. Place the level left-to-right along the front edge of the cabinet. Very few floors will be out-of-level enough in this direction to cause problems, but if necessary, tilt the file cabinet back slightly and locate the levelers underneath the front corners and adjust as necessary. Place the level on the top, near the middle of the cabinet, going front-to-back. Now, the front of the cabinet must actually be slightly out-of-level, approximately 1/8" to 1/4" higher in the front than the back of the cabinet, to help hold the drawers shut when closed.

If a bubble level is not available, a suitable alternative is to use a round pen or pencil. Place the pencil pointed front-to-back on the cabinet top. Push the pencil slightly one direction and then the other. The pencil should not continue to roll left-to-right across the cabinet. Place the pencil along the front edge, pushing the pencil slightly, it should continue to roll slowly towards the back of the cabinet. The cabinet is now properly leveled.

Steps For Removing Drawers Equipped With Anti-Tip Drawer Interlock.

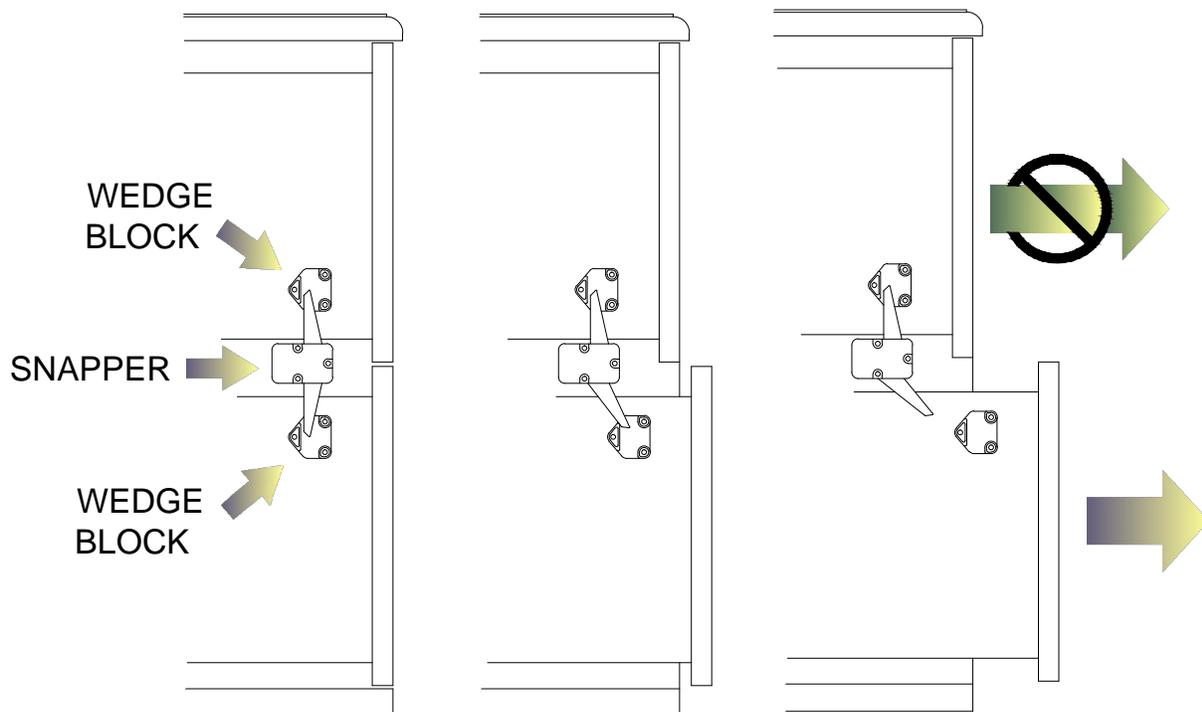

Drawer Anti-Tip Inter-lock Mechanism

The drawer interlock mechanism / wedge blocks have been carefully installed at the factory for proper operation. The mechanism is activated by the black plastic wedge block attached to the side of the drawer. When either drawer is opened, the wedge block pulls the corresponding arm of the mechanism forward, locking the other arm and preventing the other drawer from opening. When the drawer is closed, the wedge block pushes the arm back, allowing either drawer to be opened. The position of all three components relative to each other is critical and must not be modified except by an experienced furniture repair technician if they fail to function properly. In the rare event any of the parts become misaligned and both drawers can be opened at the same time, use extreme care until a repair technician can correct the problem.

Drawer Removal

If a drawer is removed, it must be reinstalled back into the same opening for the anti-tip drawer interlock mechanism to function properly. If both drawers must be removed, after pulling the first drawer open and removing, before the second drawer can be opened, the arm of the anti-tip mechanism that was pulled forward by the first drawer must be pushed back in the upright position, which will allow the second drawer to be opened also.

Please refer to the following pages for important information.

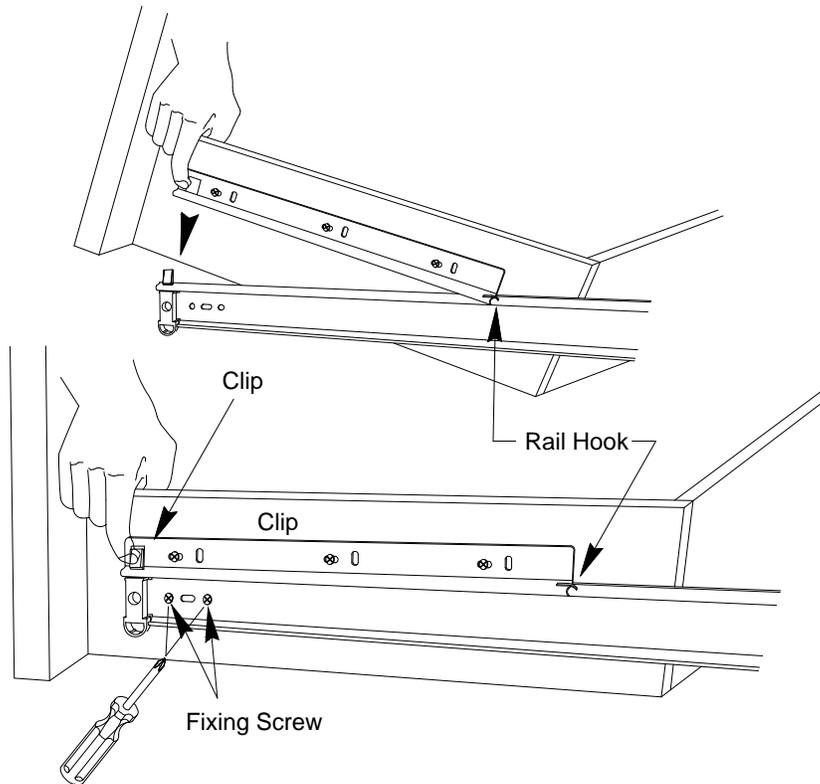

When either drawer is pulled open, the wedge block attached on the side of that drawer moves the snapper into a locked position, thereby preventing the other drawer from being opened.

If both drawers must be removed from the file cabinet, after removing the first drawer, push the snapper arm of the drawer that was removed back to its upright position, which will allow the other drawer to be opened and removed.

Steps For Removing Drawers Equipped With Ball-Bearing Side Guides.

Drawer Removal (cont.) All file drawers will be equipped with one of the two guide types depicted below.

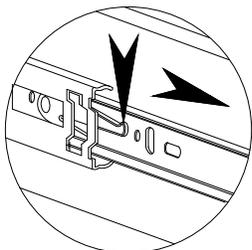

To Remove Drawer

- A. Pull the drawer fully open (remove the fixing screws if required).
- B. Simultaneously push the black plastic clip on both rails "in" and hold in place.
- C. At the same time, lift the drawer and pull forward to disengage the rail from the slide.

To Reinstall Drawer:

- A. Engage rail with the hook at the end of the slide.
- B. Lower drawer and allow the clip to pass through the opening in the rail.
- C. A "click" will be heard as the clip locks.
- D. Replace fixing screw if required.

To release
drawer slide

To remove the drawer:

- A. Pull the drawer fully open so the black latch is visible in the inside channel of the guides.
- B. Release the latches by simultaneously pushing one lever up and the other down.
- C. At the same time, pulling the drawer forward until the slides release. If necessary, empty drawer before removing.

To Reinstall Drawer:

- A. Carefully reinstall the drawer by aligning the channels on the drawer with the ball bearings in the channels of the cabinet members and gently pushing the drawer closed.
- B. Carefully open the drawer to verify it is working properly.
